

AWS Quick job

Subject: Quick Fix for PHP File Size Upload Limit - Yoast Plugin

Dear Sir,

I can help you resolve the issue with uploading the Yoast Premium plugin. This error occurs because the `upload_max_filesize` directive in your `php.ini` file is set too low, preventing larger files from being uploaded.

Since you're using AWS, I have experience with configuring PHP settings in cloud environments like AWS EC2, where access to these settings can be a bit more involved. Here's how I plan to approach it:

- Update the `upload_max_filesize` and `post_max_size` in the `php.ini` or related configuration files.
- Restart the web server to apply changes.
- Test the plugin upload to ensure everything works perfectly.

I understand this is a quick fix, and I'll ensure it's done efficiently and without any disruptions to your website.

Why choose me?

- I have solid experience in handling AWS and server configurations.
- Quick turnaround time and ensuring the fix is done properly.
- I'll double-check other related settings to prevent any future issues with large file uploads.

Looking forward to helping you resolve this quickly.

Best regards,
Shivam Dwivedi
